Pitt NSA has a website!  
Check it out [HERE!](#)

Explore our website to meet the board, reference old Stethoscopes and GBM slides, see what's next on our calendar, and find any important links!

General feedback form  
[HERE!](#)

Fill out this form to leave any comments or ideas about NSA so we can better serve you.

Financial feedback  
form [HERE!](#)

Fill out this form for any financial questions or concerns that we can help you with. This can be anonymous if you wish.

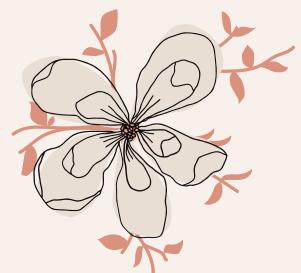

## NCLEX Question of the Week

The nurse notes the discontinuation of a prescription for total parenteral nutrition (TPN), which a client has been receiving for 2 weeks. Which type of intravenous fluid does the nurse expect to be prescribed for this client?

- A. Ringer lactate.
- B. 0.9% sodium chloride.
- C. 10% dextrose in water.
- D. 0.45% sodium chloride.

**Come to our first GBM of the  
semester!**

**When: Monday, January 26<sup>th</sup> at 7:30 pm**  
**Where: Room 125 in Victoria**

## Student Spotlight: Christina Barry

Christina has been a member of NSA for 3 years! She is hardworking, kind, thoughtful, and someone who I aspire to be like as a student and future nurse. Christina has made a profound impact on my experience as a nursing student and brings kindness and positivity to her friends and classmates.

Thank you Christina for being a wonderful friend and study buddy.

## Pet of the Week

**Dug!**

Beagle Mix

## NCLEX Answer:

### C. 10% dextrose in water. (Correct Answer)

Dextrose 10% in water is a hypertonic solution and contains a glucose content that is similar to TPN solution. This solution is used to wean the client from TPN.
